Aero-868 AC weather detector

- **manufacturer: Elero**
- power supply: 230 V
- transmitter frequency: 868 MHz
- application: roller shutters, screen blinds

Aero-868 AC is a weather detector designed for blinds, roller shutters and awnings systems, equipped with wind and insolation sensors. The device reacts to the set values of wind strength and the amount of sun by sending a signal to the window cover motor to fold or unfold them.

The Aero-868 AC device is powered by a standard 230 V voltage, making it universal and reliable, and independent of the battery charge level, like solar detectors.
