# Aero-868 Plus weather detector

- **manufacturer: Elero**
- type of power supply: solar
- standby time: 24 hours
- transmitter frequency: 868 MHz
- application: roller shutters, screen blinds

**The Aero-868 Plus weather detector** is a solar device with integrated solar panels that can operate independently for 24 hours without charging. Its task is to send a command to retract the blinds or awnings when too strong wind is detected or the insolation falls below a certain level.

The detector radio operates at 868 MHz to ensure proper signal transmission.

The device should not be used in conjunction with motion-sensitive lighting, as its energy reserve is too low for this application.
