Beninca JIM 3 drive

- **quiet operation**
- garage ventilation function
- maximum height 3.5 m
- maximum area 11 m²
- possibility of connecting emergency power supply
- LED lighting
- compatibility with the smart KNX system
- quick programming using the ARC remote control
- drive force 600 N
- maximum opening speed 20 cm/s

The Beninca JIM 3 motor is designed to operate garage doors with an area of up to 11 m². Its quiet and failure-free operation is guaranteed by the use of a Kevlar tension belt, which is additionally reinforced with steel cables.

The operational safety of Beninca JIM 3 is ensured by an amperometric sensor and an encoder. Thanks to them, **the gate moves only within set ranges and will stop if it encounters an obstacle**. The engine has a room ventilation function, you can connect an emergency power supply to it, and it is equipped with LED lighting as standard.

The soft start technology ensures the convenience of using the drive. **The STC system precisely controls the torque of rotation**, which, in addition to smooth operation, also reduces the wear of door components. Designed for intensive use.
