Beninca JIM 3 ESA TURBO drive

- **quiet operation**
- maximum height 3.5 m
- maximum area 11 m²
- possibility of connecting emergency power supply
- monitoring the current number of cycles
- drive force 600 N
- maximum opening speed 25.8 cm/s

The Beninca JIM 3 ESA TURBO engine operates at an extremely high speed, which can reach up to 25.8 cm/s, shortening the operating time. The high smooth operation of the drive is ensured by the force regulation technology, which sets the optimal motor force and ensures a gentle start of the curtain movement.

Beninca JIM 3 ESA TURBO is quiet and provides double safety thanks to the amperometric sensor and encoder. Both detect contact with an obstacle, and the encoder additionally controls the position of the gate. They immobilize her curtain if it comes into contact with any element that should not be in her light.

Additionally, Beninca JIM 3 ESA TURBO allows you to monitor the number of cycles the gate has worked, which facilitates regular maintenance.
