# Beninca JIM 4 drive

- **quiet operation**
- maximum height 3.5 m
- maximum area 18 m²
- possibility of connecting emergency power supply
- LED lighting
- Wi-Fi module
- 1040 cycles/day
- drive force 1200 N
- maximum opening speed 14.8 cm/s

**The Beninca JIM 4 model is capable of performing up to 1,040 cycles a day** with gates with a maximum area of 18 m², which makes it an option also for industry. Nevertheless, thanks to the use of a Kevlar belt reinforced with steel cables, its operation is very quiet.

The device is doubly safe for users. **It has amperometric obstacle detection, i.e. the function of stopping the gate sash in the event of encountering an obstacle**, and it also has an encoder that limits the gate movement to predefined positions.

**Beninca JIM 4 adjusts the force and pace of opening** and closing to current conditions. This translates into a quiet, controlled start of the gate, which additionally increases safety and reduces the wear of its components.

As with other Beninca models, **the user receives a product with LED lighting and the option to install an emergency power supply**.
