Beninca Wi-Fi

- **manufacturer: Beninca**
- 2 channels to control the gate and wicket
- channel load capacity: 3A
- free SUPLA app

The Wi-Fi module is a simple device that is very easy to install and equally convenient to use. It allows remote gate control using the free SUPLA application, which can be installed on a phone or compatible device. The app allows you to control the gate as well as simply check its status from anywhere in the world.

The module is a universal device that can also control compatible devices other than gates, e.g., heating, roller shutters, and even garden irrigation (configuration and compatibility are the customer's responsibility).
