Commeo Timer BT – wall-mounted radio transmitter

- **Manufacturer: Selve**
- Number of channels: 8
- Frequency: 868.1 MHz
- Installation: In a flush-mounted box
- Power supply: 1x CR2032

Commeo Timer BT is a specialised wall-mounted transmitter that can connect via a wire to a single motor and wirelessly to eight roller shutters or their groups. Its main function is setting time programs, based on which the roller shutters will autonomously adjust their position.

Configuring the Commeo Timer BT transmitter is exceptionally simple, despite the possibility of preparing complex scenarios. Programming is carried out using the dedicated Selve Commeo Timer app, which acts as an extended display for the transmitter it connects to via Bluetooth.

At any time, it is possible to switch from automatic to manual operation by moving the AUTO/MAN slider and setting the selected roller shutter to the desired position.
