Commeo Wall Send – wall-mounted remote controls

Selve Commeo Wall Send 1

Selve Commeo Wall Send 5

- **Manufacturer: Selve**
- Number of channels: 1 or 5
- Frequency: 868.1 MHz
- Power supply: 1x CR2032

Selve Commeo Wall Send 1 and Selve Commeo Wall Send 5 are exceptionally easy-to-use radio transmitters that support one and five channels of bi-directional communication, respectively. Each channel allows for the independent control of a single roller shutter or a group of them.

Both transmitters look elegant and modern thanks to their simple design, which fits into any interior. They are mounted in a 50x50 mm frame without the need for a flush-mounted box, and battery power frees the installer from the necessity of routing electrical cables.

The Commeo Wall Send 1 features a button for switching the roller shutter's operating mode from automatic to manual – this is an alternative to the sliders found in other models.

The distinguishing feature of the Commeo Wall Send 5 is a group of LEDs that visually indicate the currently operated channel in an accessible way. The transmitter also has a central channel function, which, when selected, allows controlling all roller shutters at once, e.g., to close them all quickly and simultaneously.
