# CYCLO 720

- **leaf speed: 18 m/min**
- maximum leaf width (rail gate): 15 m
- maximum leaf weight: 400 kg
- crushing protection mechanism
- can combine two drives in opposing gates

The CYCLO 720 sliding gate drive for residential use has a manufacturer-patented gearbox to reduce vibration and noise.

Protection against crushing is provided by a virtual encoder, and the control unit allows the force of the drive to be adjusted. Thanks to a magnetic limit switch, the gate opens and closes in a controlled manner.

It is possible to use the master-slave feature to combine two drives for a single opposing gate.
