- Ability to monitor the status of windows and doors
- Monitoring the energy consumption of all electrical appliances in your home

The Home Center 3 control panel is the result of over ten years of cooperation between the creators of smart home solutions, device installers and their users.

It allows you to integrate window covers and other elements of a smart home, including lighting, air conditioning and multimedia, in one system. Up to 230 devices from leading manufacturers can be paired with the control panel at the same time.

The convenience of using Home Center 3 is provided in many ways. It can be operated using buttons or gestures, it has a dedicated mobile application, as well as it works with the most popular voice assistants on the market. **The range of Home Center 3 in optimal conditions is up to 150 m, and a relatively large amount of memory and a powerful processor guarantee its high responsiveness.**
