Heroal VS Z

- **screen type: ZIP**
- box type: adaptive, adaptive inverted (contra) or flush-mounted
- drive: wired or radio-controlled
- fabric: fibreglass + PVC
- maximum dimensions (W x H): 6000 x 5000 mm
- maximum surface area: 18 m²
- box and tracks painted in RAL colours

The Heroal VS Z is an external roller blind of the ZIP Screen type. This means it is used primarily to effectively reduce the amount of light and heat entering the interior, and there is no gap between the blind fabric and the guides.

Several options are available for installing the blind box. It can appear on the wall or directly on the window. If desired, the system allows it to be hidden under plaster. In addition, a Contra option is available, i.e. turning the roller blind box 180° so that its material is further from the window or door. More space ensures better compatibility with systems employing external handles or other elements that could interfere with the covering.

The fabric used in VS Z is made from a combination of fibreglass and PVC. It is clipped into ZIP-type guides, which, like a zipper, eliminate any gaps around it. This makes the whole structure more robust and blocks the light from penetrating around its perimeter. When the blind is lowered, it becomes an effective barrier even for insects, turning into a mosquito net.

The available fabrics vary in colours, patterns and the degree of shading offered. The guides and boxes, on the other hand, can be varnished in any RAL colour.
