The Hoppe Quadro window handle perfectly complements the styling of modern Synego windows, characterised by the exceptional quality of their profiles. Its modern, sharp shapes will perfectly fit into any modern interior.

The handle uses the Secustick® system, which is designed to make it difficult to open the window from the outside by interfering with its hardware. The handle will resist such attempts, and the household members will be alerted to an attempted window opening by loud clicks. Optionally, the Quadro handle can also have a key or button lock, blocking the possibility of opening the window.

Hoppe Quadro is only available in the Eko-Okna offer.
