# InelSmart

- **manufacturer: Inel**
- automating everyday tasks
- remote control of the status of connected devices
- manual system control option
- local or Internet control
- two-way communication 868.30 MHz

**The InelSmart internet control panel** allows remote control of your window covers and other solutions compatible with smart home technologies. It allows you to remotely control, among others, roller shutters (PRX series), garage doors and lighting from a web browser on any device connected to the network. With InelSmart, you can also conveniently check the status of all connected devices.

## Why it's worth recommending the InelSmart control panel:

- **it is a solution that uses two-way communication**, which allows you to control the status of all connected devices
- **it automatically configures compatible devices connected to the system**, so the user gets a ready-to-use solution
- **it does not require the installation of an optionally available application** – any device with Internet access, such as a tablet or smartTV, is enough to control the entire system

## Choose the InelSmart control panel if your customers:

- **have compatible Inel solutions** and expect the simplest, most convenient remote operation
- **want to create an extensive smart home system**, within which, in addition to roller shutters, they will also operate gates, lighting and electrical sockets
- **want to automate many everyday activities**, such as turning lights on and off at specific times or raising roller shutters in the morning
