Integrated Blinds

- **integrated with the glass unit**
- maintenance-free
- no cleaning required
- manual (magnetic cord) or electric (solar power motor) control
- shading level: 18–100%

Integrated blinds are window covers that don't require any cleaning or maintenance while still fully functional. They offer full daylight control, ensure privacy, and stand out with their extraordinary design. The blinds can be controlled either manually, via magnetic cord, or solar-power electric motors.

As Europe's leading manufacturer with a continuously expanding product catalogue, we know that integrated blinds are an excellent addition to our offer. A true trump card in terms of convenience and functionality, as integrated blinds provide quality, security, and uncompromised thermal and acoustic performance.

Why you should recommend integrated blinds:

- They are installed inside a 2- or 3-chamber glass unit, so they arrive fully sealed and ready to use
- No cleaning required as they are vacuum-sealed between the glazing units
- Full damage protection makes them a great replacement when internal blinds might be easily broken and the external ones - simply inconvenient

Choose integrated blinds if your clients:

- can't pick the ready-made solutions but still need privacy and sun protection
- need sleek-presenting covers, as integrated blinds always stay clean and brand-new
- look for smart solutions without a power source, thanks to solar panels

Discover our integrated blinds:

- fully integrated window cover
- no glazing unit decompression
- magnetic cord manual control
- solar-powered electric motor control

Pleated blinds are available for large-scale projects only. The stock and ordering conditions require prior consultations.
