IrYs

- **curtain type: aluminium, filled with polyurethane foam**
- guides: PVC/aluminium
- solution dedicated to monoblock systems

IrYs roller shutters are a so-called semi-lintel solution, meaning the system is designed to work with aluminium or PVC monoblock windows. IrYs shutter boxes are made almost 100% from recycled materials, which, combined with very good thermal insulation achieved through appropriate insulation, results in an eco-friendly product that promotes sustainable development.

Why it is worth recommending the IrYs roller shutter:

- they were designed for use with monoblock windows, so there is no need to worry about compatibility with such systems
- they offer very effective protection against too much sun, keeping the interior from overheating while ensuring privacy
- they can be installed in a typical wall or on a timber-frame structure, which makes them highly versatile

Choose the IrYs roller shutter if your customers:

- are looking for a solution whose box is completely hidden in the wall and does not spoil the appearance of the facade

- expect effective protection against the cold in the months when discomfort comes from a lack of sun rather than too much of it
- have very large windows, up to 3.5 metres wide, and want to secure them with a single shutter

Take a closer look at the IrYs roller shutter:

- maximum shutter width: 3300 mm
- maximum shutter height: 3500 mm
- maximum curtain size: 9 m^2
- designed for installation in a traditional wall or on a timber-frame structure
- compatible with selected insect screens
- easy installation without screws or silicone
- sound insulation up to 59 dB
- thermal insulation from 0.64 W/m^2K (with 120 mm insulation)
