Ixengo 24 V

- **wicket feature**
- soft-closing feature
- unidirectional or bidirectional radio control – optional
- maximum gate leaf width: 4 m
- maximum gate leaf weight: 400 kg
- energy consumption idle/active: 6 W / 40 W

Ixengo 24 V, a drive designed for double-leaf gates, is robust and reliable. It operates comfortably for many years thanks to mechanisms such as torque control and soft-closing.

The convenience of use is enhanced by the wicket feature allowing the gate to be opened just enough for a pedestrian to pass through. A mechanism that prevents uncontrolled reversing makes the gate resistant to high wind loads.

The Ixengo 24V driveway gate drive is available in the 3S io version, allowing for easy and convenient radio control using the io protocol. This is a bidirectional protocol, which includes gate position reporting, ensuring the user never has to worry whether they closed the gate when leaving home. The device can confirm all commands issued via a portable remote, wall transmitter, or through the app.
