Nice Yubii Home control panel

- **Manufacturer: Nice**
- Communication via Z-Wave network or Elero and Nice radio protocols
- Ability to control roller blinds, blinds and other compatible smart home devices (including air conditioning, lighting, multimedia)
- For use in flats, apartments and smaller houses
- Control via mobile application or voice control using the Google Assistant, Amazon Alexa and Apple SIRI

Yubii Home is a control panel that communicates with and manages all the smart devices in your home. Its basic functionality relates to the typical control of window covers or lighting, but it can also work with for example with alarm systems, multimedia devices, and even measure the energy consumption of various devices.

It can also receive and process information from sensors, thanks to which **it is able to alert household members in the event of a water leak, carbon monoxide or fire.**

The control panel is extremely easy to use and you can use it in the way you like best. **It works with the most popular voice assistants and has a free dedicated application that works on Android and iOS devices.**

On Yubii Home, you can program scenarios that will be implemented at a certain time of the day or after the connected sensors register previously defined conditions.
