- maximum area: 14 m²
- guides and bottom bars painted in RAL colours

**The ZIP Screen external blind – Screen XT**, provides excellent control over the amount of light and heat entering the interior, ensuring optimal conditions for work and rest, including especially thermal comfort. A wide selection of materials allows it to be easily matched to the building and the investor's preferences.

Screen XT uses top-mounted boxes, which allows, among other things, for the blind to be installed on windows already at the factory, thus facilitating its assembly and speeding up the investment process. The system is built on the basis of well-known and valued solutions from EXTE, thanks to which it is possible to maintain full aesthetic consistency between different types of coverings.

## Why recommend Screen XT blinds:

- they are a convenient and reliable way to ensure thermal comfort indoors, thus reducing air conditioning costs

- they have a ZIP mechanism that guarantees the precise adherence of the blind material to the guides and no gaps
- they can be delivered to the client already on the window, which guarantees installation quality and facilitates the fitter's work

## Choose Screen XT blinds if your client:

- already has other EXTE window coverings, so all elements will be perfectly consistent in terms of form and colour
- values exceptional durability, ensured by extruded aluminium, high-quality PVC and NEOPOR, and a fabric made of resistant fibreglass, additionally protected with PVC
- is looking for a solution ready for automation with the use of wind and weather sensors and universal smart home systems

## Learn more about the Screen XT blind in the Expert XT variant:
