Secustik® New York

- **Application: PVC, aluminium**
- Standard spindle length: 32–42 mm (adjustable)
- Available colours: white RAL9016, brown, gold, silver
- Available variants: standard, with key

New York window handles use a handle rotation locking mechanism, which protects the window against break-in attempts by dislocating the hardware's locking elements from the outside. Handle turning makes a characteristic noise, whose task is to warn the house occupants when someone is tampering with the windows.

The handle is available with a key for selected spindle lengths and colours.
