Selve Home Server 3

- **Manufacturer: Selve**
- Full support for the Matter protocol
- Intuitive initial setup
- Automation of daily routines
- Remote monitoring of connected device status
- Ability to receive alerts via app or email
- Compatibility with popular voice assistants

Selve Home Server 3 is the latest version of the acclaimed smart home hub, designed primarily for managing window coverings. Thanks to Matter protocol support, it also allows for integration with lighting, heating, sensors, and IP cameras.

Choosing Selve Home Server 3 guarantees convenient control of all connected devices. It enables the creation of automated scenarios that trigger based on schedules or sensor data. At any time, users can check the status of connected devices and send commands via the SELVE Home 3 app.

Why recommend Selve Home Server 3:

- Automates repetitive tasks, ensuring window coverings are always in the perfect position without manual effort.
- Simulates occupancy, protecting the home against intruders while residents are away on holiday.
- Effectively lowers operating costs and the household's carbon footprint by reducing energy demand for climate control.

Choose the Selve Home Server 3 if your client:

- Already owns devices within the Matter ecosystem and wants to connect their window coverings.
- Wants to use popular voice assistants, including Amazon Alexa and Google Home.
- Expects smart home system compatibility with new devices, guaranteed by the constantly evolving Matter protocol.
