Situo 1 RTS is designed to control 1 device or 1 group of devices in RTS technology. Each time the button is pressed, the transmitter emits radio signals, the LED (diodes) on the remote control lights up (light up) when the button is pressed (the signal emission lasts up to 10 seconds). The programming button is located on the back of the transmitter and allows you to save its address in one or more receivers. This is the pairing process.
