Smoove 1 io

- **manufacturer: Somfy**
- type: radio, wall-mounted
- number of controlled devices: 1 or many
- battery power: CR2430 (3 V)

The Smoove Origin io wall-mounted radio remote control allows you to operate a single device, a group of devices and provides central control.

The "up" and "down" buttons respectively raise and lower the window covers. They can also control the lighting. Placed between them is **a programmable "my" button, whose primary function is to stop the movement of a roller shutter, blind or awning.** The remote control can memorise a specific position of the window cover and set it after pressing "my" (the programming button is located on the back of the module). Pressing each of the buttons is signalled by the LED diode.

Smoove 1 io is powered by a 3 V CR2430 battery.Thanks to this, **it does not require a power connection, and its installation is simple and can be completely non-invasive.**
