Sunis WireFree II io

- **manufacturer: Somfy**
- radio communication
- sensitivity range: 50–100 kLux
- sunlight detection angle: 120°
- battery power: 2 × LR6 (AA, 1.5 V)
- application: roller shutters, blinds

Sunis WireFree II io is a fully wireless, battery operated solar sensor. It is installed on the facade of the building, where it **is able to determine the level of insolation and send appropriate information to window covers and pergolas.**

The device can work with controllers with or without feedback and with TaHoma® Switch smart home applications. **Upon detecting the level of insolation set by the user, the sensor sends a command to limit the access of light** to the interior or to withdraw the covers in order to let in more light.
