TaHoma® switch

- **single or group control of smart devices**
- support for io-homecontrol, RTS and ZigBee 3.0 protocols (in terms of lighting control and cooperation with sensors in the ZigBee 3.0 protocol)
- simultaneous support for up to 300 Somfy devices and products from partner companies
- control using buttons on the device, mobile application or voice in cooperation with selected assistants (Google Assistant, Amazon Alexa and Apple HomeKit)
- manual, automatic control or using saved scenarios
- information about the status of devices in real time
- ability to program scenarios triggered using sensors or according to a schedule (timer)
- 2 buttons on the device to trigger planned scenarios

Central control of the smart home system

TaHoma® switch is the quintessence of smart home systems. It is a control panel that allows you to control all devices compatible with the TaHoma® system, an application that allows you to manage roller blinds, blinds, lighting and all other compatible smart home devices. The control unit, which connects to the Internet via Wi-Fi, has 2 programmable buttons that allow you to run scenarios, for example waking the whole house to life in the morning and preparing it for sleep in the evening. Thanks to TaHoma® switch, the entire house can be controlled with a smartphone from anywhere with Internet access, and even issue voice commands.
