TenSmart

- ✓ **remote control module for garage doors**
- ✓ two-way Wi-Fi communication
- ✓ installation on the garage door track
- ✓ broad compatibility with operators
- ✓ range up to 4 m
- ✓ power supply: DC 12–36 V / AC 12–24 V
- ✓ radio frequency band: 2.4 GHz

The **TenSmart Wi-Fi module** is a compact device designed to significantly expand the functionality of your clients' sectional garage doors, thereby maximising user convenience. It enables seamless control of the garage door via the dedicated TenSmart app, Tuya Smart, and many others.

Installation of the **TenSmart Wi-Fi module** is remarkably straightforward. It attaches directly to the garage door track and is compatible with the majority of popular garage door operators available on the market, ensuring both durability and security.

Why recommend the TenSmart Wi-Fi module to your customers:

- Allows full control of the garage door from a smartphone using free applications.
- Enables remote control of hardwired doors without the need to replace the existing operator with a radio-enabled one.
- Provides real-time feedback on the garage door's status, meaning it not only sends commands but also confirms their execution and communicates any errors.

Select the TenSmart Wi-Fi module if your client:

- Wishes to add radio control to their current garage door at a low cost, having not accommodated this during the initial installation.
- Expects the ability to check the door's position from anywhere at any time—a feature not offered by wired or one-way radio-controlled doors.

- Values smart home systems and mobile operation, making the TenSmart Wi-Fi module the optimal, secure solution.

Technical specifications of the TenSmart Wi-Fi module:

- Communication: Wi-Fi
- Range: up to 4 m
- Band: 2.4 GHz
- Dedicated applications: TenSmart and Tuya Smart (also compatible with other apps)
- Power: 12–36 V DC / 12–24 V AC
- Consumption: 20~50 mA
- Op. Temp: –20°C to +50°C
