Yooda 35DS with solar panel

- **solar drive – powered by a photovoltaic panel**
- emergency charging via microUSB port
- control: radio
- limit switches: mechanical
- maximum continuous operation time: 4 min
- permissible operating temperature: from –25°C to 50°C

The Yooda 35DS Solar roller shutter drive is an evolution of the well-known and appreciated 35R series.

It is equipped with a 5 W solar panel, thanks to which it does not require connection to the electricity network. The battery, which allows the motor to operate even in the absence of sunlight, is placed inside the device, so it does not take up space in the box. A discharged battery can be emergency charged via the microUSB port, available on the side panel, without having to open the box.

The product is very universal. Thanks to the use of mechanical limit switches, it can be used with any roller blind. Fits 40 or 50 diameter winding tubes. It is used in new investments or to change the control of existing roller blinds from manual to electric.
