

FPS GLASS BALUSTRADE

www.ekookna.com

Safety of French windows

The FPS glass balustrade is an essential complement to French balcony (portfenetr) PVC windows, which reach from the floor to the ceiling. Modern architecture places great emphasis on the minimalist aesthetics of the facade and an unobstructed view of the outside, which the FPS balustrade can provide in homes and office buildings, while guaranteeing maximum safety.

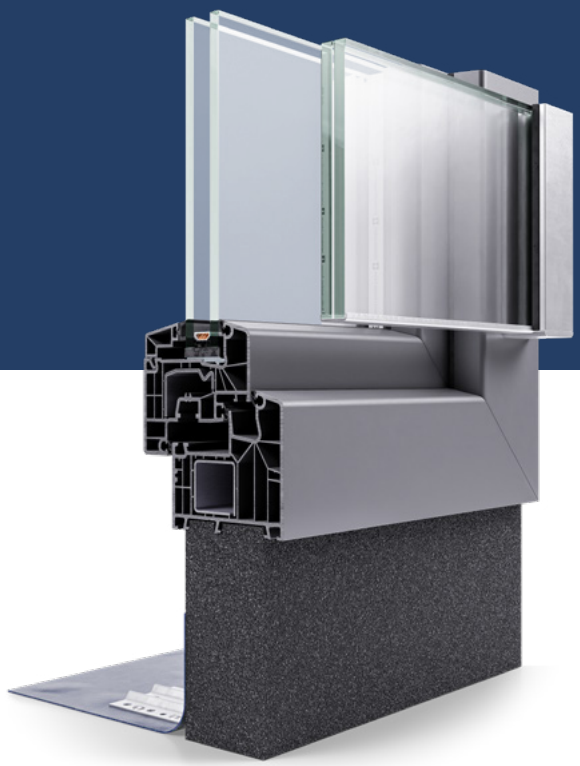

minimalist design

solid and discreet installation

reliable safety

FPS - a balustrade tailored to your needs

With FPS balustrades, it is possible to secure very tall and narrow windows as well as lower but very wide joinery.

FPS balustrade

The FPS balustrade means safe glass, an ally of your family

66.1 (12,76 mm) | 88.1 (16,76 mm) | 1010.1 (20.76 mm)

balustrade height:

900 or 1000 mm

balustrade width:

from 400 to 3000 mm

The balustrade glazing consists of two panes of ESG tempered glass joined by a PVB foil, resulting in a VSG laminated safety glass.

- damaging the glass requires great force
- glass shards remain attached to the foil
- the glass is protected against outward penetration
- the resulting glass fragments have blunt edges

Installation already at the production stage

The FPS balustrade arrives at the investment site already fully connected to the joinery. The installer does not need to perform any additional steps.

SFS anchoring for single windows

Single windows with FPS balustrades are equipped with SFS anchoring, which meets the building requirements for this type of windows. In the case of window sets, the obligation to perform appropriate anchoring remains with the installer.
