STEEL FENCE

STANDARD: **Prizzi** EK.20.101, **Lugano** EK.20.102, **Iseo** EK.20.103, **Omodeo** EK.20.104
ELEGANCE: **Torbido** EK.20.105, **Como** EK.20.106, **Nambino** EK.20.107
PRESTIGE: **Molveno** EK.20.109, **Bolsena** EK.20.110, **Varano** EK.20.113

1 Screw hinges

Their most important feature is the ability to adjust, which allows you to easily adjust the sash after assembly.

2 A wide range of sizes

Including non-standard, for individual order.

3 Very good corrosion protection

The hot-dip galvanised steel profile is covered with a layer of polyester paint, which makes it resistant to adverse weather conditions.

4 No maintenance

Thanks to the excellent protection against corrosion, the fence does not require additional maintenance, which saves time and money.

5 Easy assembly

The assembly system used does not require specialised equipment, and the attached manual guides you through the entire process step by step.

Security

Fences with a height of up to 2 metres effectively protect against the intrusion of people and wild animals into the premises.

Accessories

Video intercoms, letterboxes, house number plates, code keyboards, electric strikes, lighting.

Four-way control

The gate can be controlled by radio, code keyboard, video intercom or io-homecontrol, which makes it part of the „smart home".

A wide selection of colours

The fence can have any colour from the RAL palette, which allows you to match it to other elements of the property and its decor.

Modern look

A wide selection of designs, thanks to which the fence will become the pride of every property.

TECHNICAL INFORMATIONS

Due to legal requirements as well as technological and transport restrictions, we produce fences in the following dimensions:

- sliding gates - maximum clear dimensions: 5200 x 2000* mm,
- double-leaf gates - maximum clear dimensions: 6000 x 2000* mm,
- wickets - minimum wicket width 900 mm, height up to 2000 mm,
- spans - maximum dimensions 3000 x 2000 mm.

Some fence designs require special reinforcements for larger dimensions.
The possibility of making fences with dimensions exceeding the maximum dimensions is to be determined individually.

Fast implementation | Own transport | Own unloading
